- 11.11 **Jurisdiction.** The parties irrevocably agree that the courts of England and Wales have exclusive jurisdiction to settle any dispute or claim (including non-contractual disputes or claims) that arises out of, or in connection with, this Agreement or its subject matter or formation.

TympaHealth Data Flows and Security

Customer Data

- 1** All information captured in the app is stored in either database or files in the secure app storage area of the mobile operating system which is only accessible by the app (no additional encryption at rest is required). The files are separate for each logged in user in the app and loaded to phone memory upon user login (with pin or password).
- 2** The data stored contains patient details, appointment details, examinations performed. All media (photos and videos) captured during examination are also stored in the secure app documents storage area and are referenced to appointments and examinations by file name.
- 3** Data upload is performed using REST API using HTTPS protocol with latest TLS versions. When logging in, users are granted tokens which must be supplied when making calls to the APIs in request header. Without tokens the requests will fail. API uses Nginx web server with PHP running as fpm and stores information in Postgresql database. All internal traffic within cloud server infrastructure is internal and cannot be eavesdropped (see infrastructure diagram).
- 4** Data is retrieved using REST API using https protocol with latest TLS versions. Every request requires a valid token in the header. The token defines the scope of access to data. Tokens are granted by an Oath2 compatible authentication server. Supplying valid credentials creates and provides a JWS token which must be supplied in each API request. The tokens have limited lifespan and must be renewed when expired.
